

## Applied and industrial maths in France

*Thierry Horsin*

SMAI, Société de Mathématiques Appliquées et Industrielles  
11 rue Pierre et Marie Curie, 75251 Paris Cedex 05, France  
`smai-president@emath.fr`

I will present my vision of the evolution of what is called industrial and applied mathematics. In particular, I will present some ideas under the angle of the relationships between research, university trainings and what should be done to foster (applied and industrial) mathematics towards the future student, not only from the point of view of a researcher, but from the point of view that should be shared by private companies of our century.
